## SOUTHWESTERN MEDICAL CENTER AT DALLAS SHOWING BOTH THE PROPOSED AND EXISTING BUILDINGS

In the sketch above, architect George H. Dahl depicts the Southwestern Medical Center being developed through the activity of the Southwestern Medical Foundation on twenty-four acres of land adjoining the site of eleven acres now occupied by Parkland Hospital (City-County) with 450 charity beds.

The total area of thirty-five acres is bounded approximately by Hines Boulevard in the foreground of the picture, paralleled by Maple Avenue in the background beyond Parkland. On the south (right) is Oak Lawn, with a frontage of 1,700 feet northward (to the left) along Hines Boulevard to Knight Street.

One block to the south is a successfully functioning pediatrics center of 125 charity beds, including Scottish Rite Crippled Children's Hospital, Texas Children's Hospital, Freeman Memorial Clinic, Bradford Hospital for Babies, and Hope Cottage.

Stimulating nucleus of development in the new area of the Medical Center will be a building

for the School of Medicine with a large auditorium or amphitheater to the rear. Joining the medical college building to the north and south will be smaller buildings for research and special clinics. A dental college-clinic structure, library and students' activities building complete the teaching units.

To the extreme north from the medical buildings, on Hines, is a site for a State Psychopathic Hospital, as designated for Dallas by the Legislature some years ago when a similar institution was built elsewhere. The next Legislature is expected to appropriate funds for the Dallas hospital.

Between the site for the State institution and the medical buildings is an ideal location for a tuberculosis hospital, for which a bequest of approximately \$800,000 is available.

The role of the Southwestern Medical Foundation is to make sites available for the varied enterprises and to coordinate their efforts in medical research and teaching.
